GenCAD Export

GenCAD Export Option

When your manufacturer requires an advanced manufacturing output for driving assembly or test machines, the GenCAD format is often specified. Programs such as FabMaster or Technomatix use this file as their import format.

To facilitate this requirement, the GenCAD export cost option is an interface which writes an ASCII text file in GenCAD format. Pre-formatted to an exact specification, this format is reliable and proven in the industry.

The Easy-PC GenCAD output option conforms to the GenCAD V1.4 specification.

The GenCAD dialog is configurable to obtain the parameters required.
